

THE ROYAL IMAGE BANQUET

Four formats. Four flavors. A feast for your pixels!

Prepared by: Abraham Barreto, Viktoriya Kurmisheva, Tien Manh Nguyen
Group: Fish | ITAI 1378

EVERY IMAGE NEEDS A FORMAT

What is an image format?

An image format determines how an image's pixel data is:

- Stored
- Compressed
- Displayed
- Shared

LOSSY COMPRESSION

Produces smaller files by permanently removing some image data. (Adobe)

Example: JPEG

LOSSLESS COMPRESSION

Reduces file size while preserving the original image data. (Adobe)

Example: PNG

JPEG PIZZA

The Shareable Slice

.JPG/
.JPEG

(Canva)

Best for: Photographs and web images

Compression: Lossy (Adobe)

Strength: Small files that are easy to share

Trade-off: Strong compression can reduce image quality (Adobe)

Transparency: Not supported

ROYAL RECOMMENDATION

Choose JPEG when you need a small, shareable photograph.

PNG PARFAIT

Layers of Transparency

.PNG

(Canva)

Best for: Logos, screenshots, and graphics with text

Compression: Lossless (Adobe)

Strength: Preserves image data and supports transparent backgrounds

Trade-off: Often creates larger files than JPEG for photographs

Transparency: Supported

ROYAL RECOMMENDATION

Choose PNG when you need sharp graphics or a transparent background.

BMP BURGER

The Big Bitmap Feast

.BMP

(Canva)

Best for: Simple bitmap storage and some Windows applications

Compression: Usually uncompressed (Adobe)

Strength: Stores pixel information in a simple and direct way (Adobe)

Trade-off: Produces very large files that are difficult to share

Transparency: Limited support

ROYAL RECOMMENDATION

Choose BMP when simple pixel storage matters more than file size.

TIFF ROYAL CAKE

The Print Specialist

.TIF/
.TIFF

(Canva)

Best for: High-quality scans, publishing, and professional printing

Compression: Can be lossless or lossy (Adobe)

Strength: Preserves rich, high-quality image information (Adobe)

Trade-off: Files can be very large (Adobe)

Transparency: Can support transparency

ROYAL RECOMMENDATION

Choose TIFF when image quality matters more than storage space.

THE ROYAL VERDICT

Every format has a place at the banquet.

(Canva)

JPEG

Best for small,
shareable
photographs

(Canva)

PNG

Best for
transparent logos
and sharp graphics

(Canva)

BMP

Best for simple pixel
storage when file
size is unimportant

(Canva)

TIFF

Best for high-quality
scans, publishing, and
professional printing

FINAL TAKEAWAY

No single format is best for every image. The correct choice depends on image quality, file size, transparency, and intended use.

QUESTIONS FOR THE ROYAL CHEFS?

Thank you for joining our Image Format Banquet!
